implementation yet**

=

Implementation

```
class Meso4(Classifier):  
    def __init__(self, learning_rate = 0.001):  
        self.model = self.init_model()  
        optimizer = Adam(lr = learning_rate)  
        self.model.compile(optimizer = optimizer,  
                            loss = 'mean_squared_error',  
                            metrics = ['accuracy'])
```

Results?

```
.class 'numpy.ndarray'>  
Predicted likelihood: 0.8994  
Actual label: 1
```

Correct prediction: True
